

PEOPLE, COMMUNITIES AND PLACES

HOMELESSNESS IN SCOTLAND: Bi-annual update 1 April to 30 September 2018

This bulletin provides information on local authority homelessness applications, assessments and outcomes in the period from 1 April to 30 September 2018. It also provides data on the number of households in temporary accommodation, along with the number of households in unsuitable temporary accommodation as defined in the Homeless Persons (Unsuitable Accommodation) (Scotland) Order 2014.

The bulletin is based on data collected from local authorities through the HL1 case-level homeless applications data collection along with the HL2 aggregate temporary accommodation summary return and the HL3 case-level temporary accommodation return.

Excel workbooks containing tables and charts from this publication are available to download at <http://www.gov.scot/homelessstats>.

Chart 1: Number of applications for homelessness assistance in Scotland, by quarter, April 2002 to September 2018

Introduction

This bulletin provides information on Scottish local authority homelessness applications, assessments and outcomes in the period from 1 April to 30 September 2018. It also provides data on the number of households in temporary accommodation, along with the number of households in unsuitable temporary accommodation as defined in the Homeless Persons (Unsuitable Accommodation) (Scotland) Order 2014¹.

The purpose of this bi-annual bulletin is to provide a summary of the latest quarterly and six monthly results, and to place these in the context of longer term trends.

Separate annual bulletins, the most recent of which was published on 19 June 2018 and covered the financial year 2017/18, are lengthier publications and provide a more in-depth analysis of the causes of homelessness in Scotland and the characteristics of the households who apply to Scottish Local Authorities for homelessness assistance. The next annual publication for the year 2018/19 is planned to be published in June 2019.

This bi-annual publication also includes information on the Housing Support Services (Homelessness) (Scotland) Regulations 2012. These regulations came into force on 1st June 2013. These regulations place a duty on local authorities to assess the need for housing support for every applicant assessed by the local authority as unintentionally homeless or threatened with homelessness, and who the local authority has reason to believe would benefit from housing support services as prescribed in the regulations. If an assessment of a need for support is made, local authorities must ensure the housing support services are provided (see the section [Housing support regulations](#)).

Please note that this bulletin updates previously published figures. There may be delays in some cases being reported to the Scottish Government due to IT issues, quality assurance processes and delayed entry of data. As a result, it is estimated that the headline number of applications may change by as much as 4% (up to around 360 cases for the current quarter for example) between first and subsequent publications (see the section [Notes on the Statistics](#)).

Readers may be interested to note that Housing Options (PREVENT1) statistics are also available at <http://scotland.gov.uk/homelessstats>. These are produced on an annual basis, with the latest publication released on 19 June 2018.

¹ The Homeless Persons (Unsuitable Accommodation) (Scotland) Order 2014 replaces the Homeless Persons (Unsuitable Accommodation) (Scotland) Order 2004. It can be found online at: <http://www.legislation.gov.uk/ssi/2014/243/made>. Further information about the Order, including the recent Homeless Persons Amendment Order 2017 can be found in the [Summary of current legislation](#).

Main Points

For the six-month period of 1 April to 30 September 2018:

Applications

- There were 18,486 applications for homelessness assistance, this was 2% (284 applications) higher than the same 6 month period in 2017. Looking over the whole of the last 12 months, there has been a 1.3% (460 applications) annual increase from 35,378 applications in the 12 months to end September 2017 to 35,838 applications in the 12 months to end September 2018.
- The number of homelessness applications over time has decreased since 2010, with the latest annual figure of 35,838 applications being 21,868 (38%) less than the 57,706 applications in the 12 months to end September 2010, however this downward trend has slowed down over the last couple of years and has leveled out since 2015.
- In the year to end September 2018, the greatest increase in number of applications was seen in North Ayrshire, where applications increased by 452 (23%) from 1,931 to 2,383. South Lanarkshire saw the biggest decrease, with applications falling by 226 (11%) from 2,101 to 1,875. A total of 16 out of 32 (50%) of local authorities saw an increase in applications in the latest year to end September.
- The proportion of **direct homelessness applications** – that is those which don't go through Housing Options first - has increased in the latest 6 month period. During April to September 2018, 47% of all homelessness applications were direct applications, up 4 percentage points (from 43% to 47%) from April to September 2017.

Assessments

- There has been a small rise in the number of assessments made by local authorities when comparing the latest 6 month period with the same period in 2017 (18,499 assessments were made between April to September 2018, compared to 18,153 for the same period in 2017, an increase of 346 assessments). Over the full 12 month period to end September 2018, the number of assessments made has risen by 2% (694 assessments) compared to the previous year.
- Of the 18,499 assessments made, there were 15,247 (82%) homeless or threatened with homelessness assessments. Compared with the same period one year ago, the proportion of cases assessed as homeless or threatened with homelessness is similar (at 83%).

Outcomes

Of the 11,480 unintentionally homeless households that had an outcome, around four out of five households (9,360 households or 82%) secured settled accommodation, that is, predominantly permanent accommodation from social or private rented tenancies. This refers to those households with whom contact had been maintained and whose case was closed between April to September 2018. This proportion of households securing settled accommodation has been at a roughly constant level of around four out of five in each quarterly period over the last decade.

Temporary accommodation

As at 30 September 2018:

- There were 10,955 households in temporary accommodation, an increase of 56 households (+ 0.5%) since last year.
- Of these households in temporary accommodation, 3,315 had children – a decrease of 111 households (-3%) compared with one year earlier.
- The number of children in temporary accommodation increased by 245 children (+4%), to 6,826, compared with the same date one year ago.

For the six-month period of 1 April to 30 September 2018:

- A total of 10,475 unique households (i.e. households who entered multiple placements are counted only once) entered temporary accommodation and 10,930 exited temporary accommodation.
- The majority of households entering and exiting temporary accommodation were single person households (68% entering and 69% exiting), while around a quarter (26% entering and 25% exiting) contained children.
- Households in temporary accommodation spent an average of 178 days (just under six months) in temporary accommodation. Note that this figure relates to total time spent across all temporary accommodation placements, i.e. where households have lived in more than one placement it relates to total time spent across all accommodation. Households with children tend to be in temporary accommodation for longer (216 days) compared to households without children (167 days).
- Of the 10,931 households which exited temporary accommodation, the majority (67%) had a total duration of 5 weeks to 12 months, this includes 2,444 households (22%) which were in temporary accommodation for 5 to 12 weeks, 2,450 households (22%) which were in temporary accommodation for 3 to 6 months and 2,471 households (22%) with a duration of 7 to 12 months. A total of 1,474 households (13%) were in temporary accommodation for a year or longer, whilst 2,092 households (19%) were in for 4 weeks or less.

Breaches of the Homeless Persons (Unsuitable Accommodation Order) (Scotland)

- There were 345 breaches of the Homeless Persons (Unsuitable Accommodation) (Scotland) Order 2014² from April to September 2018. The majority of these were in Edinburgh (260 breaches).
- Between 1 October 2017 and 30th September 2018 (based on temporary accommodation placement cases closed during this period), there were 580 placements involving a breach of the Unsuitable Accommodation Order². Most of these were in Edinburgh (400 breaches), but there were eight other local authorities in which breaches of the Order were recorded.

Applications

(Table 1 to Table 4 and [Chart 1](#))

All applications

In the 6 months between 1 April and 30 September 2018, local authorities received 18,486 homelessness applications, an increase of 284 (2%) over the same period in the previous year (see **Table 1**). Looking over the whole of the last 12 months, there has been a smaller 1.3% (460 applications) annual increase from 35,378 applications in the 12 months to end September 2017 to 35,838 applications in the 12 months to end September 2018 (**Table 1**).

[Chart 1](#) shows that the number of homelessness applications over time has decreased beginning around Spring 2010. This downward trend has slowed down over the last couple of years and has leveled out since 2015. There are quarterly fluctuations, but this trend is clearer when looking at the five-quarter centred moving average.

² The number of breaches have been published according to the changes made by the Homelessness Persons (Unsuitable Accommodation Order) (Scotland) Amendment Order 2017 (implemented from 2nd October 2017). See [Summary of current legislation](#) for more details.

Chart 1: Number of applications for homelessness assistance in Scotland, by quarter, April 2002 to September 2018

Over the past few years, local authorities have been developing services in which staff assist households to consider the range of options available to address their housing needs - Housing Options³. As a consequence, some of the households who might previously have made a homelessness application may now have their housing needs met without first becoming homeless or being threatened with homelessness. This is likely to have contributed to an overall downward trend in the number of homelessness applications since 2010.⁴ The more recent leveling out of homelessness applications (since 2015) suggests that the effect of Housing Options on decreasing homelessness application numbers may have reached a plateau.

For April to September 2018, almost 9,900 homelessness applications (53%) had been through a Housing Options service prior to making a homelessness application. During the same period in 2017, 57% of homelessness applications had been through Housing Options first (**Table 1**). This decreasing trend is also evident when looking at annual change. In the 12 months to end September 2018, we see again that 53% of applications had been through a Housing Options service first, compared to 57% during the same period in 2017.

When comparing the 12 months to end September 2018 with the previous 12 months to end September 2017, there has been a 1.3% increase in the number of homelessness applications to local authorities; however trends over time have varied between local authorities. Table 2 shows that when comparing these two time periods, the number of

³ <https://beta.gov.scot/policies/homelessness/housing-options/>

⁴ [Homelessness in Scotland: 2017/18](#), provides further background information on the reductions in homelessness applications over time, in the Applications section.

homelessness applications fell in 16 (50%) local authority areas and increased in the remaining 16 (50% of) local authority areas. The largest numerical reductions were in South Lanarkshire (-226 applications, -11%) and Glasgow (-190 applications, -3%). The largest increases were in North Lanarkshire (452 applications, 23%) and East Ayrshire (237 applications, 44%).

Reasons for homelessness

The underlying reasons for homelessness have remained very stable over time in Scotland, since April 2007. **Table 3a** and **Table 3b** show this since July 2016.

Of the 18,486 homelessness applications received in the 6 months period between April and September 2018:

- The most common reason cited was “asked to leave” – which accounted for a total of 4,472 (24%) applications, a decrease of 152 applications (3%) relative to the equivalent period of the previous year;
- The second most common reason cited was “non-violent dispute within the household and/or a relationship breakdown” – which accounted for a total of 3,316 (18%) applications, an increase of 120 (4%) compared to the same period in the previous year.

Table 4a shows that, in the 6 months between 1 April and 30 September 2018, there were 12,306 (67% of the 18,486) homelessness applications where the local authority recorded a reason for failing to maintain the accommodation⁵. Applicants are given a list of possible reasons, and local authorities may select multiple reasons. A greater proportion of applications had a reason for failing to maintain accommodation between April and September 2018 (67%) compared to the same period in 2017 (65%).

Of the 12,306 applicants with reasons for failing to maintain accommodation:

- 5,364 (44% of those completing this question) cited that it was not to do with the applicant’s household, but a result of external circumstances (e.g. due to landlord selling property, fire, circumstances of other persons sharing previous property or harassment by others). This figure has increased by 330 (7%) from the same period in the previous year;
- 2,995 (24% of those completing this question) applicants cited mental health reasons and 1,184 (10%) applicants cited physical health reasons. Since the same period in the previous year, the number of applicants citing mental health as a possible reason has increased by 376 applicants (14%). The number of times physical health was cited by applicants has increased by 136 (13%).

⁵ More information on the questionnaire for homelessness applications can be found in the output specification for the data, found at: <http://www.gov.scot/Topics/Statistics/15257/OutputSpecification>

- 2,783 (23% of those completing this question) applicants cited lack of support from friends / family as a reason. This is an increase of 246 applications (10%) over the same period in the previous year; and
- 2,243 (18% of those completing this question) cited financial difficulties / debt / unemployment as a reason. This is an increase of 122 applicants (6%) compared to the same period in the previous year; and
- 713 (6% of those completing this question) cited an unmet need for support from housing / social work / health services. This is a notable increase of 272 (62%) compared to the same period in the previous year.

Assessments

(Table 1, [Chart 2](#) and [Chart 3](#))

Overall assessments

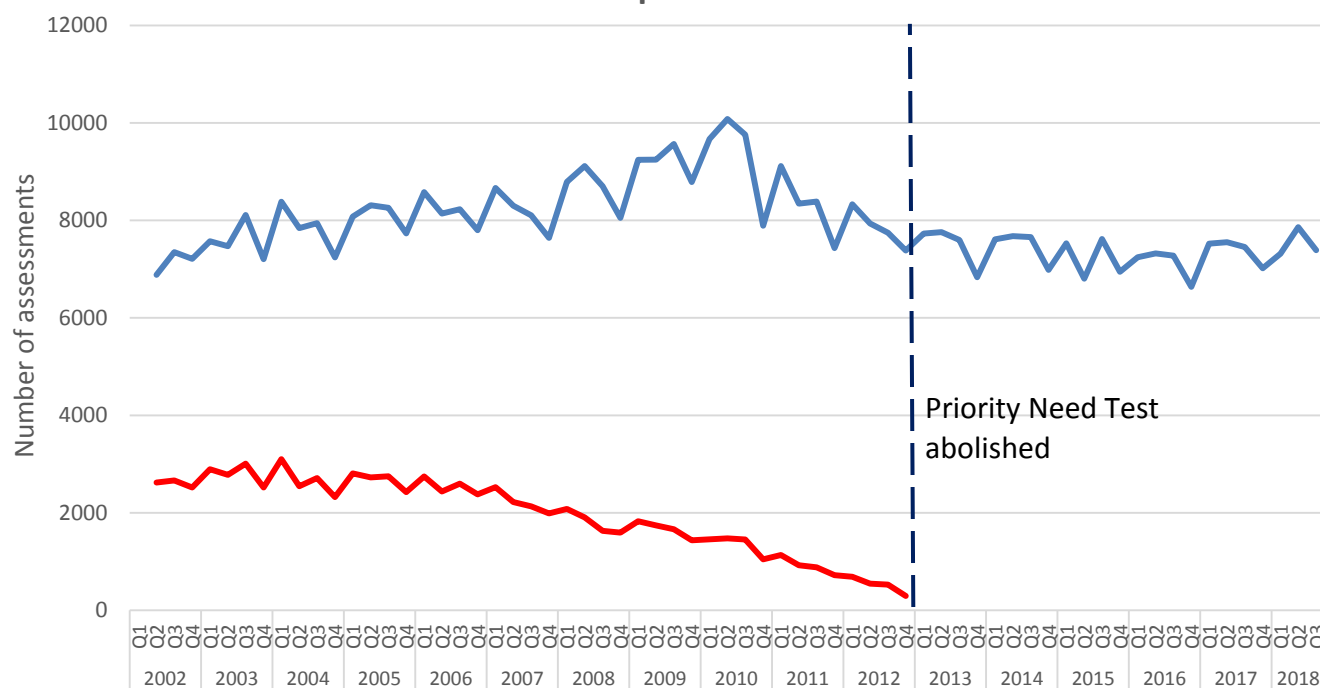

There were 18,499 assessments made between April to September 2018, compared to 18,153 for the same period in 2017, an increase of 346 assessments (2%). Over the full 12 month period to end September 2018, the number of assessments increased by 2% (694 assessments) compared to the previous year.

Of the 18,499 homelessness assessments made between 1 April and 30 September 2018, 15,247 (82%) were assessed as homeless or threatened with homelessness, 734 (4%) were assessed as not homeless and 892 (5%) had their homelessness resolved before the assessment was made. There were 1,626 (9%) applications where contact was lost before assessment, the application was withdrawn or the applicant was ineligible for assistance. Compared with the same period one year ago, the proportion of cases assessed as homeless or threatened with homelessness is similar (at 83%).

Note that the number of assessments made during April to September (18,499) is higher than the number of applications for homelessness assistance (18,486). These numbers do not match because some applications made during the period are yet to reach assessment stage; and some assessments during this period are completed for applications that were made before the period.

From 31st December 2012 onwards, the distinction between priority need and non-priority need applications was abolished. [Chart 2](#) shows the figures, over time.

Chart 2: Homelessness Assessments in Scotland, by quarter, April 2002 to September 2018

To note, prior to 31st December 2012, the priority need category included:

- unintentionally homeless and in priority need;
- intentionally homeless and in priority need;
- unintentionally potentially homeless and in priority need; and
- intentionally potentially homeless and in priority need.

Intentionality

Cases assessed as homeless (or threatened with homelessness) are also tested as to whether they made themselves homeless intentionally. If an applicant has made themselves intentionally homeless, they are not entitled to settled accommodation. They are only entitled to be housed in temporary accommodation for a reasonable period of time, and be given advice and assistance.

The proportion of cases assessed as intentionally homeless has generally increased at a national level since 2009, but since 2014 this proportion has reduced from a quarterly average of 6% to 5% (**Table 1 and Chart 3**). Of the 18,499 homelessness assessments made between 1 April and 30 September 2018, there were 802 intentionality decisions, an increase of 38 (5%) in the number of such decisions compared with the same period one year earlier.

Chart 3: Percentage of cases assessed as intentionally homeless, by quarter, April 2002 to September 2018

Table 5 shows that, between 1 April and 30 September 2018, there is a high proportion of intentionally homeless assessments in a number of Local Authorities - the highest proportions were in Falkirk (18.0%), Moray (13.2%) and Clackmannanshire (11.8%).

Outcomes

(Table 1, Table 6, Table 7 and [Chart 4](#) to [Chart 6](#))

Overall outcomes

Table 6 shows that, between 1 April and 30 September 2018, settled accommodation (private and social rented tenancies, including any non-permanent accommodation) was secured for 9,360 (82%) of the 11,480 applications where cases were assessed as unintentionally homeless and contact was maintained through to completion of the application. As Chart 4B shows, the overall number of households securing settled accommodation has decreased since 2010 (the total number of homelessness applications has also decreased over this period); however, when looking at settled accommodation outcomes as a proportion of all outcomes in each period, the proportion has remained stable.

Chart 4B: Number and percentage of cases assessed as unintentionally homeless [and in priority need], securing settled accommodation and where contact was maintained to duty discharge, by quarter, April 2002 to September 2018

Looking at all types of settled accommodation used during the past six months (April to September 2018), Table 6 shows that Local Authority accommodation comprises almost half (46%) of all outcomes for unintentionally homeless households, where contact was maintained. Over a quarter (29%) of unintentionally homeless households secured Registered Social Landlord (RSL) accommodation and 2% secured non-permanent accommodation provided for the purpose of housing support. Private rented accommodation was taken up in 5% of cases. 18% of cases assessed as homeless (where contact was maintained to duty discharge) had other outcomes, including return to previous accommodation (4%), moved in with friends/family (4%), other 'known' outcome (6%), outcome unknown (3%) and hostel (less than 1%).

However note that these percentages can vary between local authorities, for example the proportion of cases securing settled accommodation in the latest 6 month period varies between 70% in Stirling to 92% in Inverclyde. The 6 stock transfer authorities of Argyll & Bute, Dumfries & Galloway, Glasgow, Inverclyde, Eilean Siar and Scottish Borders do not have council housing stock to manage following the transfer of social housing stock to housing associations, and therefore settled accommodation with the social sector will generally be to housing association properties rather than local authority properties. The proportion of cases securing settled accommodation in the private rented sector ranges between 0% in Eilean Siar, Orkney and Shetland up to 17% in Edinburgh.

Social Lets

The number of homeless households securing a social let from either a local authority or housing association increased from around 2,300 in the April to June quarter in 2002 (Q2) to a peak of just under 5,600 in the July-September quarter of 2010 (Q3). The total number of social lets to homeless households has since fallen back from this peak and has been around 4,000 to 4,500 per quarter since the end of 2013 (see **Table 1** and [Chart 5B](#)).

Chart 5B: Social rented tenancy outcomes of homeless applications, by quarter, April 2002 to September 2018

Note that Chart 5 is based on outcomes for all applications, regardless of assessment decision or whether contact was maintained until duty discharge.

Housing support regulations

The legislation which established the housing support duty (Section 32B of the Housing (Scotland) Act 1987 inserted by Housing (Scotland) Act 2010) states that there is a duty for Local Authorities to conduct a housing support assessment for applicants who are unintentionally homeless or threatened with homelessness and which they have 'reason to believe' need the housing support services prescribed in regulations.

'The regulations' are the Housing Support Services (Homelessness) (Scotland) Regulations 2012⁶ and were established after public consultation. The services prescribed are:

- (a) advising or assisting a person with personal budgeting, debt counseling or in dealing with welfare benefit claims;

⁶ The legislation can be found at: <http://www.legislation.gov.uk/sdsi/2012/9780111018170/contents>

(b) assisting a person to engage with individuals, professionals or other bodies with an interest in that person's welfare;

(c) advising or assisting a person in understanding and managing their tenancy rights and responsibilities, including assisting a person in disputes about those rights and responsibilities; and

(d) advising or assisting a person in settling into a new tenancy.

If an assessment of a need for support is made, Local Authorities must ensure the housing support services are provided. If this assessment is made, an assessment also needs to be made for others that reside with the applicant as part of their household.

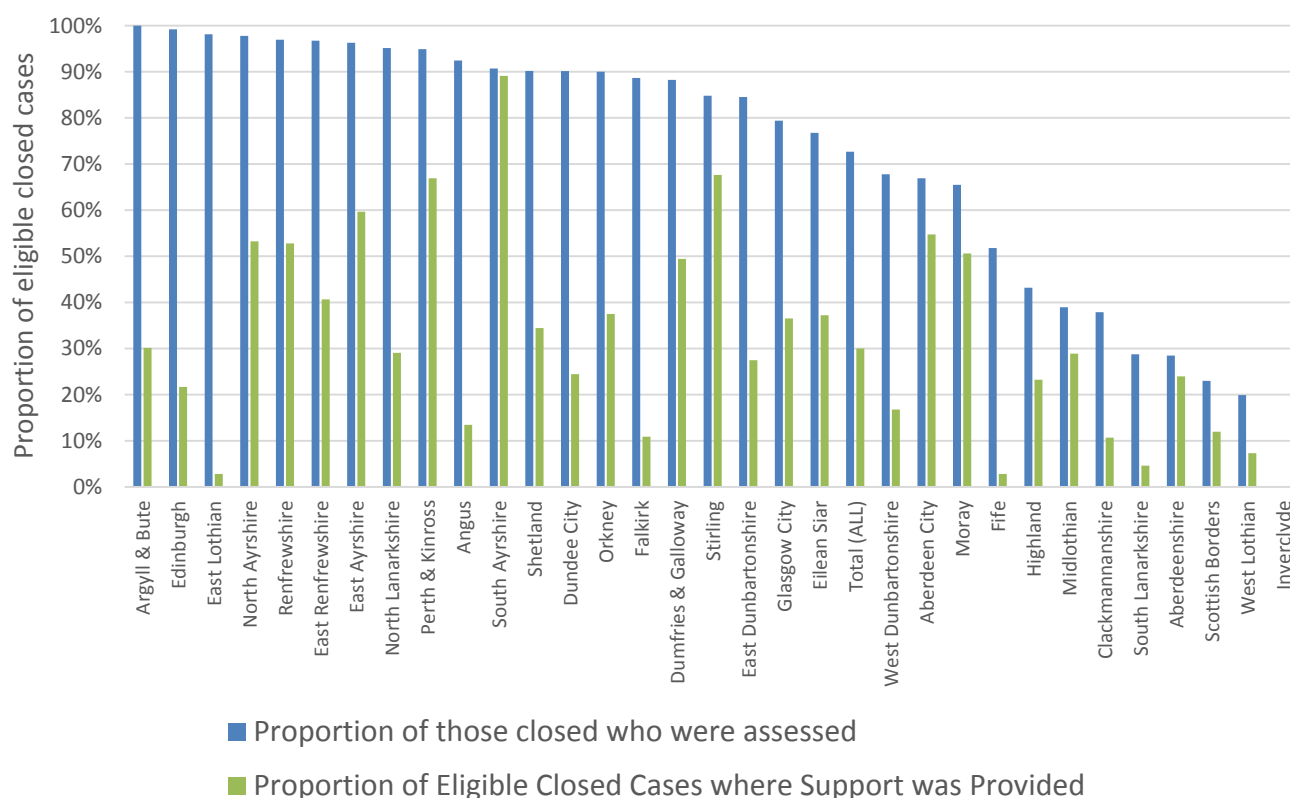

The legislation states that 'housing support services' include any service which provides support, assistance, advice or counseling to an individual with particular needs with a view to enabling that individual to occupy, or to continue to occupy, residential accommodation as the individual's sole or main residence. The form and duration of housing support will vary depending on the individual's circumstances and/or those of the people in the household.

Assessments under the regulations and actual provision of support

Table 7 shows that during the 6 month period from 1 April to 30 September 2018, there were 13,940 cases assessed as unintentionally homeless or threatened with homelessness that were closed in this period. Of these, 10,129 (73%) were recorded as being assessed under the housing support regulations, and 4,180 were recorded as having had support provided (41% of those assessed under the housing support regulations).

There are large fluctuations across Local Authorities in the number who are making assessments under the regulations and the number to whom support is provided. Some authorities are making assessments for all their closed cases, for example in Argyll and Bute. This is in contrast to other authorities who are recording very few assessments under the regulations, including Scottish Borders and West Lothian. What appears to be even more variable is the extent to which support is then being provided: there are examples where a large majority of those assessed have support provided (for example in South Ayrshire). Conversely, in other local authorities, for example, East Lothian and Fife, a very small proportion of those assessed under the regulations go on to receive support (see [Chart 6](#)).

Chart 6: Proportion of eligible closed cases assessed and with support provided under the Housing Support Regulations, April to September 2018

Note: Eligible closed cases are defined as those assessed as unintentionally homeless or threatened with homelessness and that there is a 'reason to believe' that they need the housing support services prescribed in regulations. The original idea for this chart came from [Scotland's Housing Network](#).

Temporary accommodation

(Table 8 to Table 19 and [Chart 7](#) to [Chart 9](#))

Homeless applicants may be placed in temporary accommodation while the council assesses their application or while awaiting the offer of a permanent let. Also, intentionally homeless households, and before 31 December 2012, non-priority households, may have been placed in temporary accommodation as the outcome of their application.

Since 2002, local authorities have provided the Scottish Government with the total number of households in each type of temporary accommodation at the end of each quarter. This snapshot information (the HL2 return)⁷ enables us to explore trends in temporary accommodation since 2002 (Tables 8 to 12).

⁷ For more information on the HL2 return, [see here](#).

In addition to the HL2 return, local authorities have more recently provided placement level information on households in temporary accommodation to the Scottish Government (the HL3 return). This has enabled new analysis of households in temporary accommodation since April 2017, this information was presented for the first time in June 2018. Additional information about the HL3 data received from all 32 local authorities can be found in the [data quality section](#).

Temporary Accommodation as at 30th September 2018 (snapshot information)

(Tables 8 to 12)

This section provides information on households in temporary accommodation as at 31 September 2018, from the snapshot information collected via the HL2 return.

There has been an overall rise of numbers in temporary accommodation since 2002 (See Chart 7). In 2002 (on 31st March), there were 4,153 households in temporary accommodation. This number gradually increased between 2002 and 2011 – 11,254 households were in temporary accommodation on 31st March 2011. This increase was linked to local authorities preparing for the abolition of priority need in December 2012, as required by the Homelessness etc (Scotland) Act 2003. Since 2010, this figure has remained relatively stable, incorporating a slight dip to 2014 followed by a subsequent rise to 2018. There were 10,955 households in temporary accommodation at 30th September 2018.

Chart 7: Households in temporary accommodation

The increase in the overall number of households in temporary accommodation from 2002 is likely to have been initially driven by a change to the homelessness legislation, which placed new duties on councils to provide temporary accommodation, advice and assistance for priority and non-priority homeless households. Before 2002, the majority of priority homeless households were households with children. Following this new duty there was a notable increase in the number of single people applying for homelessness assistance. These single people were also eligible for temporary accommodation.

From 2010 the number of homelessness applications has been falling, likely in part due to a consequence of the development of homelessness prevention activities by councils through adopting a 'housing options' approach to meeting housing need. This change in practice may also have contributed to the overall drop in numbers in temporary accommodation between 2011 and 2014, although the number of households in temporary accommodation has since increased between 2014 and 2018.

On 30 September 2018, the latest snapshot figures show that:

- There were 10,955 households in temporary accommodation, an increase of 56 households (0.5%) compared to the previous year. This figure remains lower than that recorded in 2010, when there were 11,264 households in temporary accommodation (Chart 7).
- Of these households in temporary accommodation, 3,315 had children or a pregnant member – a decrease of 111 households (3%) compared to the same date one year ago (Table 8b).

- The number of children in temporary accommodation increased by 245 children (4%) to 6,826 compared to the same date one year ago (Table 8c).

Local Authority variation

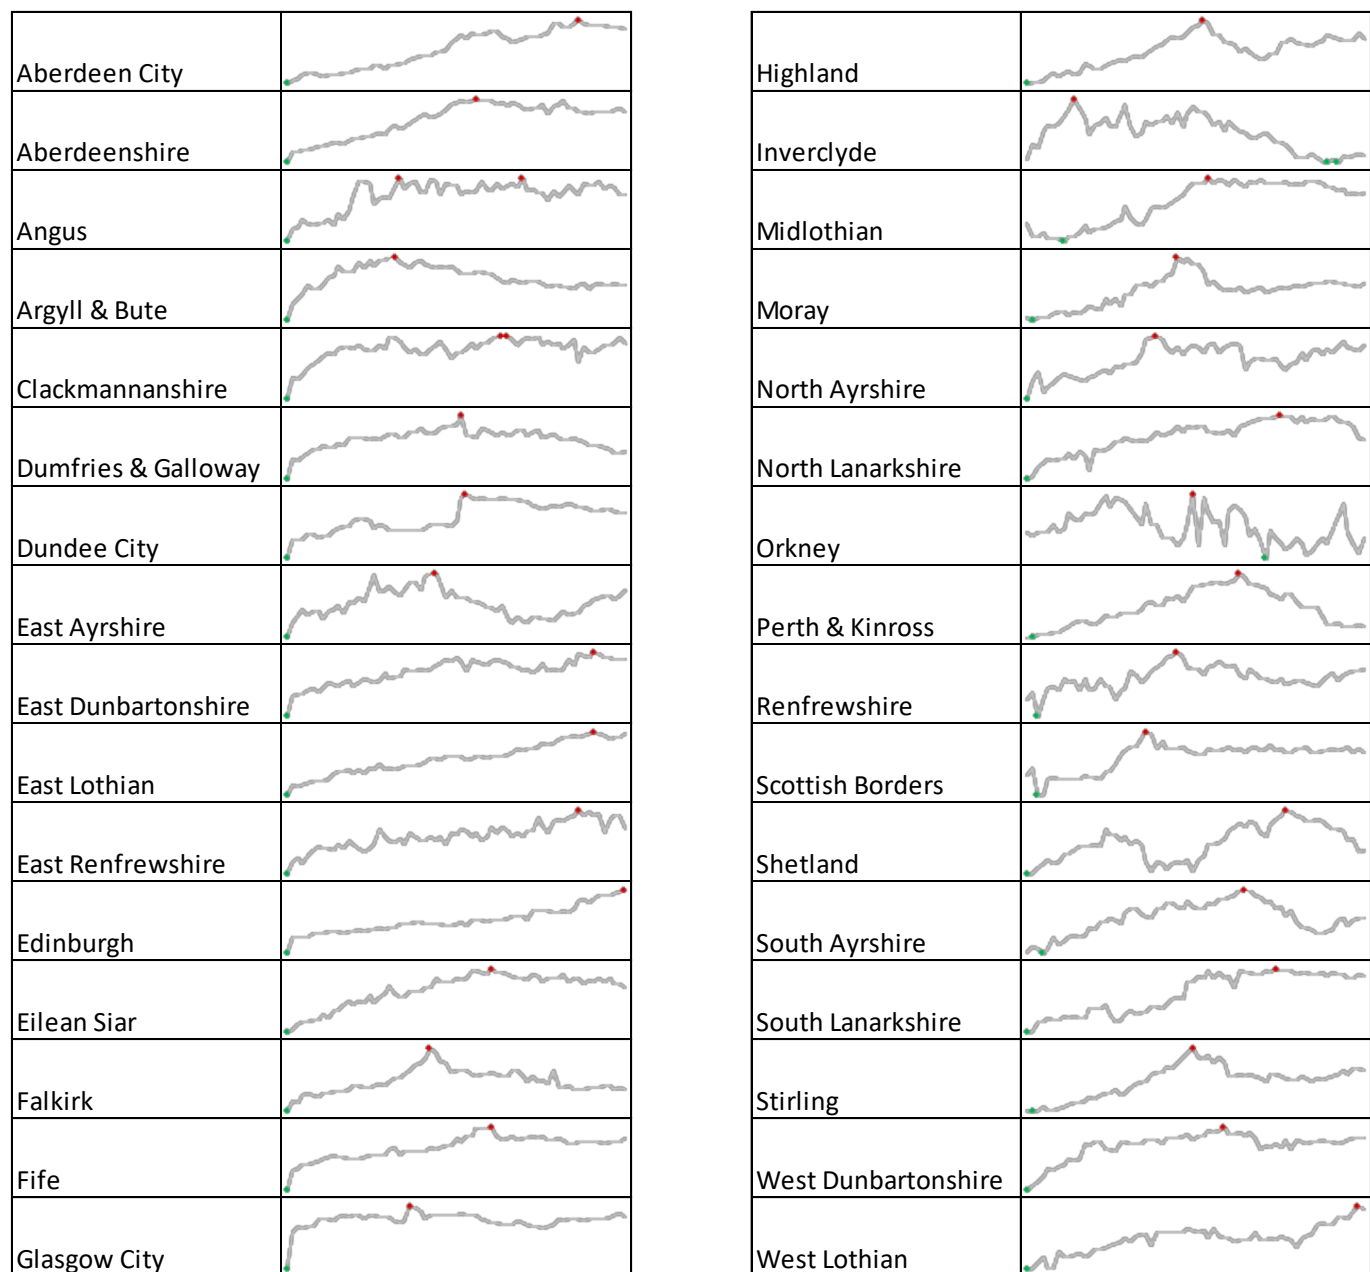

Chart 8 below shows the general shape of the variation amongst households in temporary accommodation in local authorities from June 2002 to September 2018. The red dot indicates the maximum number of households in temporary accommodation and the green dot the minimum. The overall rise in the Scotland level figure over the years reflects this rise amongst many local authorities.

However, although the majority of local authorities have seen an increase between 2002 and 2018, it should be noted that some have seen a decrease in numbers in temporary accommodation in recent years. Argyll & Bute, Dumfries & Galloway, Falkirk, Inverclyde and Perth and Kinross for example, have seen numbers decline since part way through this time period.

Comparing 30th September 2018 with 30th September 2017, more local authorities (16) saw a percentage decrease in the number of households in temporary accommodation, than those which saw a percentage increase (13 local authorities) and those whose temporary accommodation remained the same (3 local authority) (see Table 9).

Chart 8: Temporary Accommodation by local authority

From 30 June 2002 to 30 September 2018

Types of temporary accommodation used

The majority of households in temporary accommodation at 30th September 2018 were in Local Authority or Housing Association accommodation (61%), with a further 15% in hostels and 10% in bed and breakfast (Table 8a).

Households with children or pregnant women are mainly provided with Local Authority or Housing Association accommodation (78%), with a small proportion (1%) being placed in bed and breakfast accommodation (Table 8b). On 30 September 2018, there were 37 households with children or pregnant women in bed and breakfast accommodation. This figure remains unchanged from the same date one year ago.

On the 30th September 2018, there were 19 breaches (13 of which were in Edinburgh) of the [Homeless Persons \(Unsuitable Accommodation\) \(Scotland\) Order 2014](#) (Table 12).

This is an increase compared to the same date one year ago⁸ when there were 12 breaches of the Order, which may be a reflection of the Homelessness Persons (Unsuitable Accommodation Order) (Scotland) [Amendment Order 2017](#), implemented from 2nd October 2017. The 2017 Amendment Order specifies a reduction in the number of days that local authorities can use unsuitable accommodation such as bed and breakfasts for families with children or pregnant women from 14 to 7 days, except in exceptional circumstances.

Placement level analysis of Temporary Accommodation usage

This section provides analysis and information on households in temporary accommodation, based on the placement level data collected in the HL3 return.

Numbers of households (Tables 13 to 17)

Between 1st April 2018 and 30th September 2018, a total of 10,475 unique households entered temporary accommodation within this year (Table 13). Over two-thirds of these households (68%) were single person households, whilst around a quarter (26%) contained children (Table 14).

During the same time period, 10,930 households exited temporary accommodation, a figure 4% higher than the number of households entering temporary accommodation. 69% of the households exiting temporary accommodation were single person households, and 25% contained children (Table 14), similar percentages compared to households entering temporary accommodation.

Table 15 presents information on the number of households entering and exiting temporary accommodation during the 6 months, April to September 2018 by type of accommodation.⁹ It is worth noting that there were over 1,500 more households exiting social sector accommodation (local authority ordinary dwelling and housing association accommodation) compared to entering this type of accommodation. Conversely, there were over 1,000 more households entering bed and breakfast accommodation compared to exiting this type of household during the time period. However some of these differences are likely due to how some households have been moving between different placements whilst in temporary accommodation, for example some households may have been placed in hostel or bed and breakfast type of accommodation when they first entered temporary accommodation, after which they may subsequently have been placed in social sector or other types of temporary accommodation before exiting temporary accommodation completely.

⁸ Breaches as at 30th September 2018 are not directly comparable to that at the same date in previous years since they are defined by different time periods specified by the Amendment Order 2017. It is not possible to back-date with the renewed 'over 7 day' definition due to the nature of the HL2 recording and return from local authorities.

⁹ The use of particular types of temporary accommodation varies between local authorities, as shown by the local authority level figures provided in Table 15.

Table 16 provides information on the numbers and percentages of households entering and exiting temporary accommodation by both household type and accommodation type. This shows that there are some differences in placements by household type. For example 88% of households entering temporary accommodation in hostels are single people, whilst 51% of households entering temporary accommodation in housing association dwellings contain children.

It should be noted that the information presented on household type is derived from the information on household type as at the time of the original homelessness application, and therefore may not reflect the actual composition of the household whilst in temporary accommodation.

Total duration in temporary accommodation – at a household level (a measure of duration across all placements that a household has been in)

Household level analysis (Table 17)

These figures look at total duration in temporary accommodation across all placements, i.e. where a household has had more than one placement then the average time figure relates to the total time spent across all placements.

Across all local authorities during the period from April 1st to September 30th 2018 households spent on average 178 days in temporary accommodation. Households with children tend to be in temporary accommodation for longer (216 days for households with children compared to 167 days for households without children). This is particularly pronounced in some local authorities (for example, in Inverclyde, the average number of days is 237 for households with children and 93 for households without children). Although it is worth noting that the number of families is considerably smaller than the number of only adult households.

Chart 9 shows that of the 10,931 households which exited temporary accommodation during April to September 2018, the majority (67%) had a total duration of 5 weeks to 12 months, this includes 2,444 households (22%) which were in temporary accommodation for 5 to 12 weeks, 2,450 households (22%) which were in temporary accommodation for 3 to 6 months and 2,471 households (22%) with a duration of 7 to 12 months. A total of 1,474 households (13%) were in temporary accommodation for a year or longer, whilst 2,092 households (19%) were in for a 4 weeks or less.

Chart 9: Number of households by total duration in temporary accommodation

Duration in temporary accommodation (within each placement)

Placement level analysis (Charts 10 to 13)

Chart 10 shows that of the 20,913 placements which were closed during April to September 2018, the majority had a duration of 12 weeks or less, this includes those that lasted one week or less (22%); those that lasted 1 to 4 weeks (18%) and those that lasted 5 to 12 weeks (25%). 4% of placements had a duration of a year or longer. Note that a single household may have more than one placement during their time in temporary accommodation.

Chart 10: Time spent in temporary accommodation for those exiting accommodation from April to September 2018

Chart 11 shows that across temporary accommodation placements which ended during April to September 2018, the average length of stay can vary by accommodation type. Local authority, housing association and private sector placements are likely to involve longer periods (i.e. 3 months or longer). Most hostel placements last 12 weeks or less. Bed and breakfast placements tend to be much shorter in length (most placements fall in the 1 week or less category); nonetheless, the chart shows that in some cases, such placements last for longer than 7 months and in some cases, over a year.

Chart 11: Time spent in temporary accommodation by accommodation type for those exiting accommodation from April to September 2018

Chart 12 shows that the majority of single person households are in temporary accommodation placements for shorter periods (12 weeks or less); this is likely due to the volume of single person households in accommodation types which are intended to be shorter-term, i.e. bed and breakfast accommodation and hostels (Table 17). For other household types there is a fairly constant distribution across the duration periods other than lower numbers for 1 year plus.

Chart 12: Time spent in temporary accommodation by household type for those exiting accommodation from April to September 2018

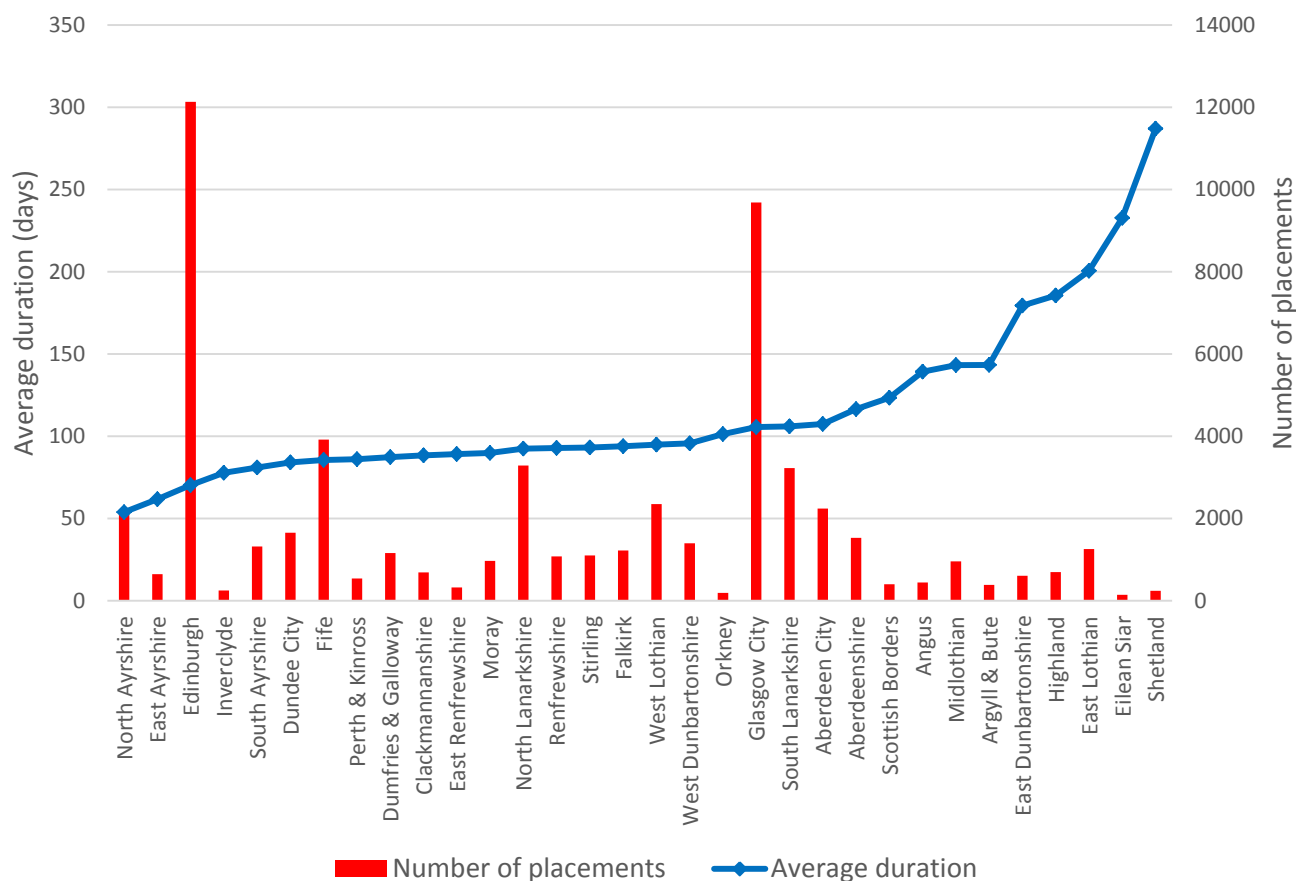

Local authority variation in placement duration

Most local authorities have an average placement duration of around 100 days (Chart 13). This is the average length of time for all placements.

Chart 13 shows that some local authorities with a relatively small number of placements exiting temporary accommodation during April to September 2018 can have the longest average stays (for example, Shetland and Eilean Siar). Conversely, local authorities with a much greater volume of placements (Glasgow and Edinburgh), can have smaller average durations, particularly Edinburgh, where the average placement is less than 70 days.

Chart 13: Average duration in Temporary Accommodation by local authority

Different local authority trends emerge when looking at average time in specific temporary accommodation types. Notably, some local authorities do not use some accommodation types. For example stock transfer local authorities make very little, or no use of local authority dwellings (Glasgow, Scottish Borders, Dumfries and Galloway, Argyll and Bute, Inverclyde and Eilean Siar), while other local authorities do not use Housing Association accommodation (for example, Aberdeen City, Clackmannanshire and Fife).

Applications in which temporary accommodation was not offered

An HL3 return is completed when a local authority has a statutory duty to provide temporary accommodation under the homeless persons legislation, however, a local authority is also required to indicate when they do not offer any temporary accommodation to a household and thus, are acting unlawfully. During six months April to September 2018, 1,850 HL3 applications were 'not offered' temporary accommodation (Table 18). The majority (95%) of these cases were in Glasgow¹⁰.

¹⁰ As a result of data quality concerns around the capture of all offers of temporary accommodation, all not accommodated cases from 1st April 2018 are being reviewed by Glasgow City. It is anticipated that this will result in a reduction in the reported number for Q1 and Q2 2018/19 when revised data is submitted. The process for recording tenancy offers has also been reviewed and training is being undertaken.

Breaches of the Unsuitable Accommodation Order

In addition to the information on breaches available through the HL2 (the number of breaches at a 'snapshot' date), the HL3 return provides the number of breaches throughout the time period; we would expect the number of breaches shown through the HL3 to be higher as these are based on breaches throughout the year rather than a single point in time. In total, there were 345 breaches of the Homelessness Persons Unsuitable Accommodation Order during the period April to September 2018 (Table 19), based on temporary accommodation placement cases closed during this year.

A greater number of breaches of the Order were recorded April to September 2018 compared to April to September 2017 (165). This is likely due to the Amendment Order 2017, which was implemented from October 2017 and which shortened the number of days that local authorities can use unsuitable accommodation, such as bed and breakfasts, for families with children or pregnant women from 14 to 7 days, except in exceptional circumstances. The majority of breaches during April to September 2018 were in Edinburgh, but there were eight other local authorities in which breaches of the Order were recorded.

Monitoring of Temporary Accommodation

We would be pleased to hear your views on the placement level HL3 analysis provided in this publication, and further on any additional tables or charts which you may find useful. You can get in touch with us via email at homelessness_statistics_inbox@gov.scot

Please note: All of the tables in this publication are available in electronic format at: <http://www.gov.scot/homelessstats>

Notes on the statistics

HL1, HL2 and HL3 recording

We are grateful to all 32 Scottish Local Authorities who submitted their HL1, HL2 and HL3 returns on time.

Given the continuous nature of the recording system, figures are updated on an on-going basis and may differ from those previously published. There may be delays in some cases being reported to the Scottish Government due to IT issues, quality assurance processes and delayed entry of data – particularly at the end of the financial year. As a result, we estimate that the headline number of applications may change by as much as 4% between first and subsequent publications.

Reporting of the Number of Applications (per quarter)											
Publication Date	2016				2017				2018

The data over time

In 2001, the Scottish Parliament passed legislation which placed additional duties on Local Authorities to provide a minimum of temporary accommodation, advice and assistance to all applicants assessed as homeless. From September 2002, this took effect and councils have been required to provide temporary accommodation, advice and assistance to non-priority applicants who in the past would have received advice and assistance only. This has had a noticeable impact on applications, which has been reflected in changing assessments and outcomes for homeless people. Some tables in this release therefore present time series data so that this impact can be tracked.

In December 2001, the Scottish Government changed the data collection system for the case-based HL1 return to provide more detailed information on applications by individual households and to allow more timely reporting. This entailed changing to an electronic data capture system which allows cases to be registered and updated on a continuous basis, as well as enabling applications made by the same household to be linked.

The data collection system introduced in December 2001 allows analysis by individual households and the identification of repeat applications. However, this is not the case for earlier data and so analyses comparing data over longer time periods will tend to refer to applications rather than individual households. This is also the case for analyses of flow through the assessment process where repeat applications by the same individual household might be assessed differently and have different outcomes. For other analyses, it is useful to distinguish individual households and so the unit of analysis (applications or individual households) is specified in the footnotes for each table.

The data collection was further revised in April 2007 in the light of the Homelessness etc. (Scotland) Act 2003, with some additional information included to reflect current best practice. Further information on the HL1 can be found at <http://www.scotland.gov.uk/Topics/Statistics/15257/HL1revisions>.

Interpretation of statistics on temporary accommodation

The figures on households in temporary accommodation relate to households which have been placed in temporary accommodation by a Local Authority under the Homeless Persons legislation. This will include households for whom the Local Authority's decision and final action is still pending, as well as households which were secured such accommodation as a final action by the authority under the legislation.

The summary HL2 return (since 2002) has provided a snapshot picture of the numbers of households in temporary accommodation as at the last day of each quarter.

In June 2005, the HL2 return was revised in order to monitor the implementation of the Homeless Persons (Unsuitable Accommodation) (Scotland) Order 2004. The revised return records the number of households with children or pregnant women in temporary accommodation as at the end of the quarter, the number of those in unsuitable accommodation as defined by the Order, and the number of those in accommodation which breaches the Order. Not all use of unsuitable accommodation is in breach of the Order as such use may be allowed under exceptional circumstances as defined in the Order (see [summary of legislation](#) below).

Since April 2016, it has been mandatory for local authorities to also complete an HL3 return, which provides placement level information on households in temporary accommodation. By providing placement level information, it is possible to provide in-depth analysis of the temporary accommodation use, for example, length of stay in temporary accommodation.

How we maintain quality

HL1 and HL2

The quality of this publication depends critically on the quality and consistency of the information supplied to us by Local Authorities on the HL1 and HL2 returns. The quality statement on the Scottish homelessness statistics website at <http://www.scotland.gov.uk/Topics/Statistics/15257/quality> sets out the ways in which we do this. The main focus of our systems is to ensure consistency between the HL1 and HL2 and consistency of the case level information within each HL1 return.

HL3

The quality of the additional temporary accommodation analysis provided in this publication also relies on the information supplied by local authorities. From April 2016, it became mandatory for local authorities to submit placement level information on temporary accommodation through the HL3 return. The Scottish Government have been working with local authorities to quality assure this data. This has involved comparison with snapshot HL2 figures at the end of each quarter and further, consistency checks with associated HL1 records.

The 'Tables' document, which is published alongside this document (and is available here: <http://www.gov.scot/Topics/Statistics/Browse/Housing-Regeneration/RefTables>) provides an additional 'HL3 Data Quality' tab with a local authority breakdown. Some local authorities have a large difference between the number of households in temporary accommodation recorded through their HL2 versus their HL3 data as at 30th September 2018. Reasons for these differences are given below the table.

How we deal with revisions and corrections

Our approach to revisions and corrections is set out in detail on the Scottish homelessness statistics website at <http://www.scotland.gov.uk/Topics/Statistics/15257/revisionpolicy>. In summary, published statistics and supporting reference tables are generally revised when the figures next appear in any publication. However, if a revision is significant resulting in a major change to the published figures a note showing the revisions will be published as soon as possible on the homelessness statistics website. It will also be distributed to all known recipients of the originally published data via email and the ScotStat mailing list.

How we consult with users and providers of statistics

Local Authorities in Scotland provide homelessness statistics as a by-product of their administration of Scottish homelessness legislation. The main users of homelessness statistics are Local Authorities, housing associations, The Scottish Government and voluntary bodies such as Shelter, Homeless Action Scotland and Crisis. In November 2011, we re-established the Scottish homelessness statistics

user provider group with representatives of providers and users of the statistics. We aim for the group to meet once a year. The minutes and papers from meetings of the group can be found on the Scottish homelessness statistics website at: <http://www.scotland.gov.uk/Topics/Statistics/15257/22540>.

Summary of current legislation

The Housing (Homeless Persons) Act 1977, now consolidated into Part II of the Housing (Scotland) Act 1987, introduced statutory duties on Local Authorities to assist those who are homeless or threatened with homelessness (potentially homeless), including providing accommodation in certain circumstances.

The legislation currently requires Local Authorities to make inquiries into the circumstances of applicants to satisfy themselves whether the applicant is homeless or potentially homeless. Once the authority is satisfied this is the case, prior to 31st December 2012, it also determined whether the applicant had a priority need. However, from 31st December 2012, the priority need test has now been abolished (see Paragraph 24). The Local Authority then tests whether the applicant became homeless intentionally and, in some cases, whether the applicant has a local connection with another authority in Scotland, England or Wales. A local connection with an authority means that the applicant normally resided in that area from choice, either because he/she was employed in or had family associations with it, or for other special reasons.

Section 24 of the Housing (Scotland) Act 1987, as amended, defines homelessness for the purposes of the Act as follows. A person is homeless if he/ she has no accommodation in the UK or elsewhere. A person is also homeless if he/ she has accommodation but cannot reasonably occupy it, for example because of a threat of violence. A person is potentially homeless (threatened with homelessness) if it is likely that he/ she will become homeless within two months. A person is intentionally homeless if he/ she deliberately did or failed to do anything which led to the loss of accommodation which it was reasonable for him/ her to continue to occupy.

Section 25 of the Housing (Scotland) Act 1987, as amended, defined the categories of household regarded as having a priority need for accommodation. Further details can be found in the Code of Guidance on Homelessness. This is available on-line at: <http://www.scotland.gov.uk/Publications/2005/05/31133334/33366>.

The Housing (Scotland) Act 2001 amends the 1987 Act and requires councils to provide a minimum of temporary accommodation, advice and assistance to all applicants assessed as homeless, regardless of whether they have been assessed as being in priority need. The Homelessness etc. (Scotland) Act 2003 is more long-term in scope, notably introducing a phasing out of the distinction between priority and non-priority applications. The ultimate aim of the Act was to ensure that everyone assessed as being unintentionally homeless was entitled to settled accommodation from 31st December 2012.

In November 2012, the Scottish Parliament approved the Homelessness (Abolition of Priority Need Test) (Scotland) Order 2012 which gave effect to this commitment.

From 31st December 2012 the priority need test for homeless households was abolished. As a result, from this date, all unintentionally homeless households are entitled to settled accommodation.

Summary of Local Authority duty to homeless households:

1. Unintentionally homeless [and in priority need]¹¹

- Provide temporary accommodation until permanent accommodation has been secured.
- Permanent accommodation is defined as:
 - A Scottish Secure Tenancy (SST)
 - An Assured Tenancy (not a Short Assured Tenancy)
 - If the applicants have previously been evicted for anti-social behaviour in the last 3 years, or if they are subject to an anti-social behaviour order - a short Scottish Secure Tenancy can be offered.

In some circumstances, the Local Authority can provide non-permanent accommodation. These circumstances are laid out in the Homeless Persons (Provision of Non-permanent Accommodation) (Scotland) Regulations 2010.

Under certain circumstances, a Local Authority may apply a local connection test and refer the applicant to another Local Authority. However, the receiving Local Authority must then secure settled accommodation for the applicant.

2. Intentionally Homeless [and in Priority Need / Homeless and not in Priority Need]:

- Provide temporary accommodation for a reasonable period of time, advice and assistance.

3. Potentially homeless, unintentionally so [and in Priority Need¹²]:

- Take reasonable steps to ensure that accommodation does not cease to be available.

4. Potentially homeless, intentionally so [and in Priority Need / Potentially Homeless and not in Priority Need]:

- Provide advice and assistance to help retain accommodation.

The Homeless Persons (Unsuitable Accommodation) (Scotland) Order 2004 came into force on 6 December 2004, and is intended to prevent the routine use of unsuitable temporary accommodation for households with family commitments. Under this Order, Local Authorities cannot put households with children and pregnant women into temporary accommodation which is not suitable, unless

¹¹ If before 31st December 2012.

exceptional circumstances apply. Unsuitable accommodation is defined in the Order as accommodation which does not meet standards relating to the physical properties of the accommodation (the physical standard), its proximity to health and education services (the proximity standard) and its suitability for use by children (the safety standard).

The 2004 order was revoked by [The Homeless Persons \(Unsuitable Accommodation\) \(Scotland\) Order 2014](#), which came into force on the 21st November 2014. The 2014 order adds the additional requirement that the accommodation must be wind and watertight.

While the Order provides for exceptional circumstances, in which accommodation which does not meet the physical and/or proximity standards may be used, the safety standard must always be met. Further details can be found in the Code of Guidance available on-line at:

<http://www.scotland.gov.uk/Publications/2005/05/31133334/33366>

The 2014 Order specifies that the local authority may provide an applicant with temporary accommodation which does not meet the requirements set out by Article 5 of the Order, but for no longer than 14 days in total in respect of that person's application. The [Homeless Persons \(Unsuitable Accommodation\) \(Scotland\) Amendment Order 2017](#), which came into force in October 2017, reduces the number of days from 14 to 7 days before a 'breach' is recorded for the applicant remaining in such unsuitable accommodation.

The Housing Support Services (Homelessness) (Scotland) Regulations 2012 came into force on 1st June 2013. These Regulations make provision in relation to the duty of Local Authorities to assess whether some persons found to be homeless or threatened with homelessness ("an applicant") need housing support services. Regulation 2 prescribes four types of housing support services which apply for the purposes of that duty. If a Local Authority has reason to believe that an applicant may be in need of one or more of these services, it must assess whether the applicant, or any person residing with the applicant, is in need of such support. If so, the Local Authority must ensure that the service is provided to the person who needs it. Further information on these regulations can be found at: <http://www.scotland.gov.uk/Publications/2013/06/3279/2>.

Comparability with other UK homelessness statistics

England

In England, Part 7 of the Housing Act 1996 and the Homelessness Act 2002 place statutory duties on local housing authorities to provide assistance to people who are homeless or threatened with homelessness. Authorities must consider all applications from people seeking accommodation or assistance in obtaining accommodation. A main homelessness duty is owed where the authority is satisfied that the applicant is eligible for assistance, unintentionally homeless and falls within a priority need group, which are specified in the legislation (e.g. households with dependent children or a pregnant woman).

Where a main duty is owed, the authority must ensure that suitable accommodation is available for the applicant and his or her household until a settled home becomes available for them. Where households are found to be intentionally homeless or not in priority need, the authority must make an assessment of their housing needs and provide advice and assistance to help them find accommodation for themselves. Where the applicant is found to be intentionally homeless but falls in a priority need category the authority must also ensure that accommodation is available for long enough to give the applicant a reasonable opportunity to find a home.

The Ministry of Housing, Communities and Local Government introduced a Homelessness Case Level Information Classification (H-CLIC) in April 2018 to coincide with the commencement of the Homelessness Reduction Act 2017. H-CLIC collects case level data and provides more detailed information on the causes and effects of homelessness than has been collected in the past. The first set of statistics since commencement of the Homelessness Reduction Act on 3 April 2018 and the first statistical release using Homelessness Case Level Information Collection (H-CLIC) data was on the 13 December 2018 and is available here:

<https://www.gov.uk/government/statistics/statutory-homelessness-in-england-april-to-june-2018>

The Homelessness Reduction Act 2017 places new legal duties on English councils so that everyone who is homeless or at risk of homelessness will have access to meaningful help, irrespective of their priority need status, as long as they are eligible for assistance. The Act amends part VII of the Housing Act 1996.

The most recent statutory homelessness statistics for England are available at: <https://www.gov.uk/government/collections/homelessness-statistics>

Wales

In Wales, Local Authorities are bound by similar statutory duties as those in England. The data is collected on a quarterly Local Authority level WHO12 return, similar to the P1E form in England.

The most recent statutory homelessness statistics for Wales are available at: <http://wales.gov.uk/statistics-and-research/homelessness/?lang=en>

The National Assembly for Wales has enacted new homelessness provisions which can be found at: <http://www.legislation.gov.uk/anaw/2014/7/contents/enacted>. In particular, section 66 details a new prevention duty.

Northern Ireland

In Northern Ireland statistics on homelessness are sourced from the Northern Ireland Housing Executive (NIHE). Under the Housing (NI) Order 1988, NIHE has a similar statutory responsibility to secure permanent accommodation for households who are unintentionally homeless and in priority need; to secure temporary accommodation in a variety of circumstances and to provide advice and assistance to those who are homeless or threatened with homelessness.

The most recent statutory homelessness statistics for Northern Ireland are available at: <https://www.communities-ni.gov.uk/publications/northern-ireland-housing-statistics-2017-18>

Scotland

Scottish homelessness statistics are available at: <http://www.gov.scot/homelessstats>

Key similarities and differences

Because of the differences in collection methods, and in the legislative duties to homeless households in Scotland following the 2001 homelessness legislation, care needs to be taken in comparing homelessness statistics across the 4 countries.

Under the Scottish legislation, Local Authorities have wider duties to assist non-priority homeless households. In addition, a key part of the Scottish legislation, often referred to as the 2012 homelessness commitment, led to increasing proportions of homeless households being assessed as in priority need and from 31 December 2012 this test has been abolished. As a result, the definition of priority need was therefore broader in Scotland than in other parts of the UK. As a direct consequence of these changes, significantly higher proportions of all homeless and priority homeless households in Scotland are single person

households. In addition, the time scale for threatened with homelessness is two months in Scotland compared to 28 days in England.

In England and Wales, analyses for 'households accepted by Local Authorities as owed a main homelessness duty' are roughly equivalent to Scottish analyses for unintentionally homeless households [and in priority need for those assessed prior to 31st December 2012].

A National Statistics publication for Scotland

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be interpreted to mean that the statistics: meet identified user needs; are produced, managed and disseminated to high standards; and are explained well.
